Art Unit: 2815

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 3, 5, 6, 7, 8, 9, 12, 13, 17, 18, 19 are rejected under 35 U.S.C. 102(b) as

being anticipated by Panchou et al.

Panchou et al shows a semiconductor substrate 11 and a compliant interconnect element 30 disposed on a first surface of the substrate. Said interconnect defining a chamber in the form of a via between the first surface and a surface of the interconnect. Said compliant layer is formed of polymer. A conducting pad 12 is shown formed on the substrate and a conducting layer 14 is shown disposed in the compliant layer in contact with the conducting layer. A printed circuit board having contact 38 thereon is further shown.

The steps of providing are deemed to be taught.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4, 10, 11, 14, 15, 16, 20-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Panchou et al..

Art Unit: 2815

Though Panchou et al fail to distinctly teach the features recited in these claims, the features recited are deemed to be well known features commonly formed in semiconductor device structure and would have therefore deemed to be well known to one having ordinary skill in this art.

Farnworth et al, Akram et al ( 6002180, 5956605), Kimura and Abbott et al are all cited to show compliant layers having chambers.

In order for the case to be further considered for allowance it is suggested that the applicant recite a more detailed description of the compliant interconnect. The current broad recitation compares to many types of interconnects well know in this art.
